WAM C-102

Tower Treatment

Application

WAM C-102 is an effective product for control of scale and corrosion in industrial cooling systems. This solution impedes crystallization of calcium carbonate while dispersing precipitated materials collected either from the water source or from the local environment.

Dosage

The chemical residual required is proportional to the amount of dissolved solids in the raw water, the cycles of concentration desired in the tower, and the magnitude of air-borne contamination. Consult your Waterside Asset Management representative for assistance.

Feeding

WAM C-102 is miscible with most common water treatment chemicals. Best results are obtained when this material is applied with a chemical metering pump. Not compatible with strong acids.

Packaging

Available in polyethylene drums and totes.

Technical Data

Form	Liquid
Color	Straw
Specific Gravity (g/mL)	1.185
Density lb/gal (kg/L)	9.9 (1.19)
pH (neat)	8.4 to 9.4
pH (1% solution)	9.2 to 10.2

Safety Data

Do not open this container or use its contents without first reading the material safety data sheet. If one is not available, call (425) 293-5763 for a replacement.
