WAM C-204

Tower Treatment

Application

WAM C-204 is an effective multi-purpose product for control of scale and corrosion in industrial cooling systems. This formula impedes crystallization of calcium carbonate while dispersing precipitated materials collected either from the water source or from the local environment. Yellow metals commonly found in heat exchange systems are also protected from corrosion.

Dosage

The exact dosage will be influenced by the amount of solids dissolved in the water and the level of particulate washed from the air. Consult your Waterside Asset Management representative for assistance.

Feeding

WAM C-204 is miscible with most common water treatment chemicals. This formula is not compatible with strong acids. Best results will be obtained when this material is applied by a chemical metering pump.

Packaging

Available in polyethylene drums and totes.

Technical Data

Form	Liquid
Color	Yellow
Specific Gravity (g/mL)	1.070
Density lb/gal (kg/L)	8.92 (1.07)
pH (neat)	11.6 to 12.6
pH (1% solution)	11.7 to 12.7

This product is constructed with materials previously authorized by the USDA for use in federally inspected meat and poultry plants.

Safety Data

Do not open this container or use its contents without first reading the material safety data sheet. If one is not available, call (425) 293-5763 for a replacement.
